EDUCATION

California Polytechnic State University, San Luis Obispo

Jun. 2025

Bachelor of Science in Computer Engineering, Cum Laude

SKILLS

Languages: Java, Python, TypeScript, JavaScript, SQL, C++, C

Technologies: Spring Boot, React, PostgreSQL, MySQL, Kafka, Kubernetes, Datadog, Git, Maven, Jenkins, Postman, JIRA

Concepts: Microservices, REST APIs, GraphQL, Distributed Systems, Event-Driven Architecture, CI/CD

EXPERIENCE

PayPal

Aug. 2025 - Present

Software Engineer

Austin, TX

- Collaborated on an AI-powered incident triage platform processing 400+ alerts per month across multiple observability systems, reducing triage time by 90% (from ~20 min → ~2 min) through automated diagnostics and root-cause insights delivered via Slack.
- Built real-time incident correlation into the triage agent, surfacing concurrent incidents at alert trigger time to reduce false positives and improve root-cause accuracy, and implemented AI token usage tracking per API call for cost visibility into the agent's AI usage.
- Improved production observability by building a Datadog monitoring dashboard and alerting suite for a merchant processing 35M+ transactions and \$8.5B in quarterly TPV, enabling faster detection and investigation of payment-processing incidents.
- Developed Java/Spring Boot microservices and React/TypeScript applications for Braintree's global post-processing platform, supporting merchant funding, settlement, disputes, and payment operations.

Western Digital

Jun. 2024 – Sept. 2024

Embedded Software Development Engineering Intern

Irvine, CA

- Developed and optimized firmware for enterprise hard disk drives using C++ and Python, incorporating Continuous Integration/Continuous Deployment (CI/CD) practices to ensure scalable, reliable code aligned with industry standards.
- Designed and implemented software algorithms and data paths, contributing to the efficient operation of hardware cores and systems, ensuring firmware functionality met performance expectations.
- Contributed to the restructuring of command handlers by designing standardized command execution files and objects, following the ACS6 standard to ensure consistency and accuracy in handling hardware commands.

PROJECTS

WeFit

Jan. 2025 - Jun. 2025

- Built WeFit, a social fitness iOS app in Swift/SwiftUI backed by Supabase (Postgres, Auth, Storage) for real-time data sync across users.
- Implemented workout logging across 3 activity types (running, weightlifting, basketball), a points-and-streaks gamification engine, and group challenges with goal tracking.
- Built a social feed with likes, comments, and media uploads via Supabase Storage, enabling users to share workout progress and engage with each other.

Caltrans Traffic Detection System

Sept. 2024 - Mar. 2025

- Built a real-time traffic monitoring system with YOLOv8, ReactJS, ExpressJS, and PostgreSQL, automating vehicle detection, classification, and tracking from live Caltrans camera feeds with 98% accuracy.
- Optimized system performance using multi-threaded buffering and cloud GPU acceleration, enabling real-time processing of live video streams at scale.
- Developed an interactive dashboard for visualizing annotated traffic data, vehicle counts, and movement metrics, improving accessibility of traffic pattern analysis for transportation planning use cases.
